Green Ways
ENVIRONMENTAL CONSULTING

COMPANY PROFILE 2026

Environmental compliance, in clear steps.

We obtain your environmental permits and waste licences, prepare impact assessments and environmental management plans, and keep your facility compliant through every renewal.

An environmental consultancy licensed by the National Center for Environmental Compliance

ABOUT US

A Saudi company with one specialty: your environmental compliance.

Green Ways was founded to support private facilities and government bodies in Saudi Arabia in achieving full compliance with environmental laws and regulations, improving their environmental performance, and contributing to environmental protection and sustainability.

We work in line with the environmental laws and regulations issued by the Ministry of Environment, Water and Agriculture and the National Center for Environmental Compliance, and apply recognised local and international environmental standards.

Our team follows a clear method: it starts by assessing the facility's current environmental position, then identifies gaps and risks, then delivers practical solutions, with continuous follow-up to keep the facility compliant over the long term.

OUR VISION

To lead in developing and delivering sustainable environmental solutions that enable projects and industries in Saudi Arabia to protect natural resources and achieve environmental excellence.

OUR MISSION

To deliver practical, compliant and innovative environmental services across all sectors, including impact assessments, environmental management plans, monitoring, inspection and rehabilitation planning.

OUR VALUES

The compass behind our decisions.

Sustainability first

Long-term protection of the environment comes first, and our recommendations aim for a healthier environmental future.

Integrity and commitment

We hold to high ethical standards and deliver our services in line with Saudi regulations and the requirements of the authorities.

Practical solutions

We address complex environmental challenges with practical solutions, from impact assessments and management plans to rehabilitation and monitoring.

Client-centred excellence

We listen to our clients, understand their needs, and design our services for practical, measurable results.

Knowledge and enablement

We share our expertise and best practice so teams can run environmentally responsible operations.

Transparency and accountability

Clear communication and accurate reporting build trust with clients, regulators and the community.

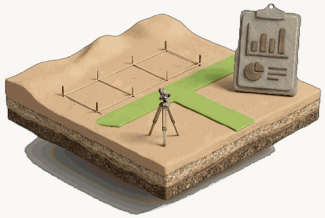

OUR SERVICES

Four tracks that cover your environmental compliance end to end.

Permits and licences

So your facility starts and stays within the regulations.

Studies and plans

What the authorities ask for before construction, during operation and at closure.

Monitoring and audit

Know where you stand before the inspector visits.

Systems and training

So compliance becomes part of how your team works.

Permits and licences

So your facility starts and stays within the regulations.

1 Environmental permits, issued and renewed

We prepare the construction or operating permit file according to your activity's category, submit it through the permits and licences platform of the National Center for Environmental Compliance, and follow it until it is issued. Then we remind you well before renewal is due.

2 Waste management licences

We prepare your facility for the waste management licence that fits its activity through the MWAN platform, prepare the regulatory documents, coordinate with the authority, and support renewal and ongoing compliance.

3 Environmental records

We prepare and update your facility's environmental records so they are ready for review by the authorities at any time.

Who this track is for

New facilities, operating facilities that need an operating permit or its renewal, and facilities that produce waste or collect, transport or treat it.

Studies and plans

What the authorities ask for before construction, during operation and at closure.

1 Environmental impact assessments

A study that identifies your project's expected effects on air, water, soil and the community, and proposes measures to reduce them. Required according to the activity's category before a construction permit is issued, and prepared by a service provider licensed by the Center.

2 Environmental management plans (EMP / CESMP)

A practical plan that sets out the sources of impact on site during construction or operation, the control and monitoring measures, and who is responsible for what.

3 Rehabilitation and closure plans

A plan that returns the site to a safe, stable condition when the activity ends or closes, required for certain activities specified in the regulations.

4 Rehabilitation of degraded sites

Assessment of the damaged site, a plan to treat it and restore its environmental balance, and follow-up on implementation.

5 Geotechnical reports

Reports on soil and ground layers that support project design and its environmental studies.

Who this track is for

Investors and developers before they start, facilities that expand or change their activity, and activities approaching their end.

Monitoring and audit

Know where you stand before the inspector visits.

1 Environmental inspection and conformity

A full environmental inspection and follow-up on the implementation of impact assessments and management plans, assessing compliance with permit conditions, with practical recommendations.

2 Environmental audit

A systematic review of your facility's compliance with the regulations and permit conditions, including the environmental audit study that Category 2 and 3 facilities submit every three years.

3 Coordinating environmental measurements

Coordinating air quality, emissions and noise measurements with accredited measurement providers, as part of the monitoring programmes your activity requires.

4 Environmental sustainability reports

Reports that measure your facility's environmental performance, improve transparency and support sustainability initiatives.

Who this track is for

Operating facilities that want to confirm their compliance, those that received observations or violations, and those preparing to renew a permit.

Systems and training

So compliance becomes part of how your team works.

1 Environmental management system

Policies, procedures and records sized to your facility, turning compliance into organised daily work rather than a seasonal effort.

2 Readiness for ISO 14001 and ISO 45001

We assess the gaps against the standard, implement what is needed, and prepare you for the certification body's audit.

3 Training for environmental staff

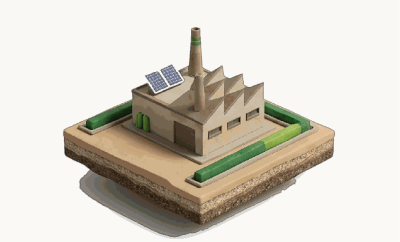

Practical training that enables your team to apply environmental requirements with confidence.

Who this track is for

Facilities that want to demonstrate their compliance to clients and authorities, and build lasting in-house capability.

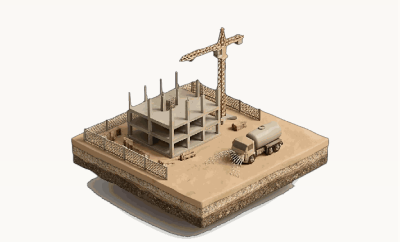

SECTORS

Every sector has its own environmental requirements.

Factories

Operating permits, monitoring and measurement programmes, and periodic emission reports.

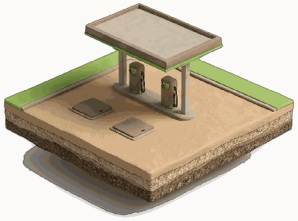

Contractors and construction projects

Construction permits, a site environmental management plan, and dust and waste control.

Healthcare facilities

Managing hazardous medical waste and handing it to licensed service providers.

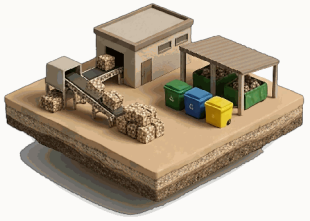

Fuel stations

Operating permits, environmental inspection, and management of petroleum waste.

Quarries and mining

Impact assessments, rehabilitation and closure plans, and environmental monitoring.

Waste and recycling

Licensing your activity through the MWAN platform, and preparing facilities and records.

HOW WE WORK

Five steps on one path.

1

We assess your facility

We review your activity, site and current regulatory position.

2

We identify the gaps

We compare your position with the regulations and set priorities.

3

We prepare the studies

Impact assessments, management plans and rehabilitation plans as your activity requires.

4

We obtain the permits

We prepare the file and follow it with the authorities until it is issued.

5

We follow up and renew

Periodic monitoring and reports, and a reminder before every renewal.

REGULATORY FRAMEWORK

We work to the requirements of the competent authorities.

المركز الوطني للرقابة على الالتزام البيئي
National Center for Environmental Compliance
المملكة العربية السعودية

وزارة البيئة والمياه والزراعة
Ministry of Environment Water & Agriculture

مـــوان MWAN
المركز الوطني لإدارة النفايات
National Center for Waste Management

Laws and regulations we work to

- The Environment Law and its implementing regulations
- Implementing Regulation for Environmental Permits for Establishing and Operating Activities
- Implementing Regulation for Environmental Inspection and Audit
- Implementing Regulation for Air Quality
- The Waste Management Law and its implementing regulations
- GCC Unified System for Healthcare Waste Management

Our role in the targets of Saudi Vision 2030

- **Strengthening environmental sustainability**
- **Reducing pollution and conserving natural resources**
- **Supporting the circular economy and waste management**
- **Raising environmental awareness and building national capability**
- **Enabling facilities to operate responsibly**
- **Supporting the Saudi Green Initiative and the rehabilitation of degraded land**
